Summary

Self-taught Web Developer with a background of Urban And Regional Planning. Tried to focus on full stack development throughout the learning process and single page application was one of my goals. I have successfully completed multiple personal projects.

Key Skills

- HTML/HTML5
- CSS/CSS3
- Chrome Devtool
- JavaScript
- MongoDB
- Express Js
- React Js
- Node Js
- Firebase
- Bootstrap5
- Material UI
- GitHub

Projects

Shop&Shoot

- This is a niche website only to sell cameras. Home page shows only 6 products; all products are in 'All Cameras' Tab. 'Buy Me Now' button takes to 'Purchase Page' through a private route. Which shows you details of your desired product and takes your shipping info. Your login/registration info will be saved into Database (MongoDB).
- Dashboard has two types of routing i.e. public and admin. If You are an admin, you can access the database like you can add new product, delete any product, modify or cancel any order etc.
- Public dashboard shows payment, my orders, review and logout. Reviews provided by users will be added to the database and will be shown in the Home page.
- **Used Technology:** Axios, DotEnv, Express, Firebase, Material UI, MongoDb, React, React Bootstrap, React Icons.
- **Links:** *Firebase live site* , *GitHub(Client Side Code)* , *GitHub(Server side code)*, *Heroku(Server)*

Travel The World

- This is an international tourism management website. You can book your desired tour package/packages around the world. Booking page shows details info of the package and conformation form. After filling the form your desired package will be stored in our database (MongoDB).
- You can see Your Bookings if you are logged in. If not, don't worry we will take you through login. You can cancel your booking if you want.
- You can see all booking orders in all bookings page and you can delete any booking order or update booking status.
- **Used Technology:** Axios,Dotenv,Express,Firebase,MongoDb,React,React Bootstrap,React Hook Form,React Icons.
- **Links:** *Firebase live site*, *GitHub(Client Side code)*, *GitHub(Server Side code)* , *Heroku (Server)*

Kushtia Health Care center website

- This full responsive to small screen devices site is built for a hospital. Appointment and Reports tabs on the header (NavBar) are made private route. And also it redirects to login page if you are not logged in. After logging in you will be redirected to your destination.
- Login Methods: Google sign in, Email/Password registration and login. Toggle between registration and login.
- **Used Technology:** Firebase , React, React Bootstrap.
- **Links:** *Firebase live site*, *GitHub Codes*
